

Coding Test – AI Product Requirement & UI Generator

Objective

Build an application that converts a meeting transcript into:

- Product Requirements Document (PRD)
- User Stories
- Functional Requirements
- UI/UX Design / Wireframes

Time Limit

5 Hours

Input

Meeting transcript provided as text or uploaded file.

Expected Outputs

- Product Requirements Document (PRD)
- User Stories
- Functional Requirements
- UI/UX Design / Wireframes

Deliverables

1. Deployed Application URL

Provide a publicly accessible URL where reviewers can test the application.

Examples: Vercel, Netlify, Firebase Hosting, Render, Railway.

The application should allow reviewers to upload/input a transcript and generate PRD, User Stories, Functional Requirements, and UI/UX outputs.

2. GitHub Repository

Provide a GitHub repository containing:

- Source code
- README.md
- Setup instructions
- Environment configuration guide
- AI model/provider configuration instructions

README should explain:

- Architecture overview
- Technology stack
- Assumptions
- Known limitations
- Future improvements (optional)

Submission Format

Application URL:
<https://your-app-url.com>

GitHub Repository:
<https://github.com/username/repository>

(Optional) Demo Video:
<https://loom.com/...>

Evaluation Criteria

- AI Extraction Accuracy – 35%
- Product Thinking – 20%
- UI/UX Generation – 20%
- Code Quality – 15%
- UX & Presentation – 10%

Important Note

Submissions without a working deployed application URL or GitHub repository will be considered incomplete.
